

Control Collaborate Connect

Project and Safety Management for Contractors

Improve document process controls

Generate and track Submittals, Transmittals and Change Orders to coordinate responses and revisions.

Streamline RFI management

Enhance project teams collaboration on responses with workflow and centralized documents.

Centralize project and contact information

Track leads, contacts, opportunities, and projects in one centralized database with secure, role based access.

Track Safety Compliance

Manage all aspects of your safety procedures from training to accident and incident tracking to OSHA reporting.

Skyline Construction Series

Skyline Construction Series helps Project Managers, Contractors, Engineers, and Owners better track projects and safety while managing day to day activities. All without ever having to leave Microsoft Outlook.

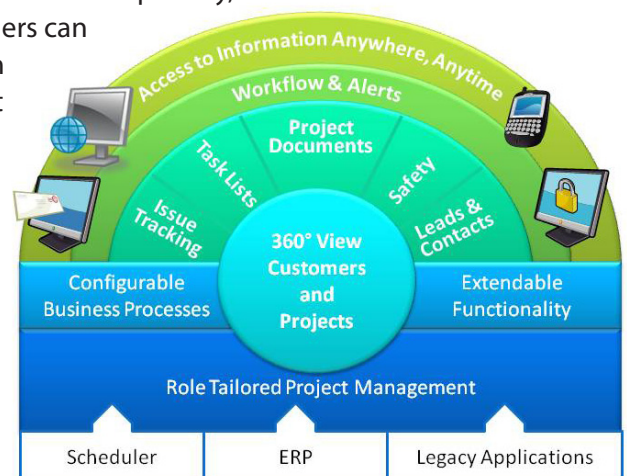

Cost effective and easy to implement, the Skyline Construction Series provides complete project and safety management for the contracting industry including general contractors, specialty contractors, architects, and engineering firms. With centralized information to track, update and control projects through Microsoft Outlook or via the web, your employees don't need extensive training to be more productive.

Get tight control of your projects and safety with:

- Project Contracts
- Collaborative RFIs/RFQs
- Submittals and Transmittals
- PO/Subcontracts
- Change Orders
- Tasks and Issues
- Document Management
- Training and Certifications
- Safety Programs
- Inspections
- Incidents
- Human Resources

Project and Safety Management your way

Companies use their own documents to collaborate on Projects and Phases through the built-in SharePoint document management function. With iPhone, Windows Mobile and tablet capability, Project Managers and Owners can work remotely anywhere in the world using an Internet connection. Track due dates and completion of tasks, issues and cases automatically, without paper spreadsheets and checklists. Monitor progress from anywhere with easy to read views, dashboards and email alerts.

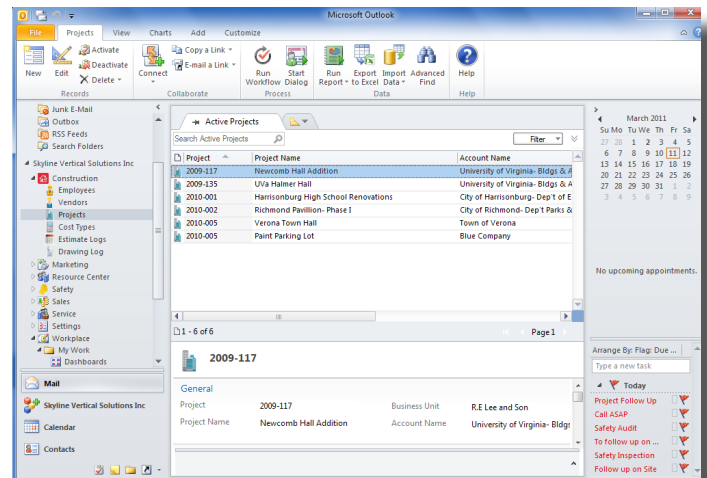

Project Management for Contractors

Project document and cost control management built to fit contractors

Using industry standard project hierarchy with user defined trades or phases, Skyline Construction Series manages any sized project entirely in Microsoft Outlook. Create and track project documents including RFI's, RFQ's, Change Orders, Submittals, Transmittals, Meeting Minutes, and Issues. Manage and report on all costs and activities related to individual and consolidated projects.

Microsoft technology for quick adoption and easy support

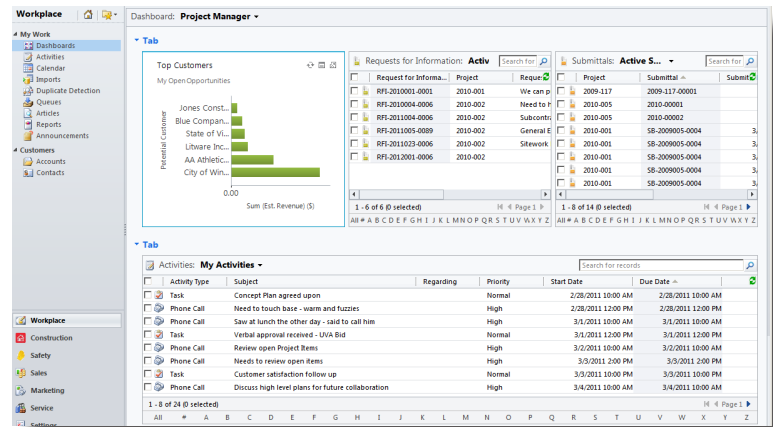

Easily setup and track budgets and costs with powerful approval routing based on Microsoft Workflow processes. Built on the Microsoft xRM platform, which flows through Microsoft Outlook, the Skyline Construction Series is easy to learn, reduces the number of touches and consolidates information in one place.

Manage all your projects directly through Outlook.

Skyline Construction Series' rich feature set includes:

- Setup and Track Key Project Information – Set up and track Contracts and Contract Billing.
- Copy Projects – Set up new jobs with simple "Copy Template" for Projects with Phases and Tasks.
- Improve Document Process Flow and Controls – RFI's, RFQ's, Change Orders, Submittals, Transmittals, Meeting Minutes and Issues can be generated and tracked to coordinate follow up and ensure key dates aren't missed. Route critical document information to team members for follow up, review and approvals using organizational specific workflows.
- Streamline RFI and RFQ Management – Allow Project teams to collaborate on responses with centralized SharePoint document libraries. Drop and drag documents to SharePoint while version control keeps the full history of changes.
- Centralize Project and Contact information – Track leads, contacts, opportunities, and projects in one centralized database with secure, role-based access.
- Improve on time performance – Track due dates and completion of tasks, issues and cases automatically without complex spreadsheets and manual checklists. Monitor project status from anywhere with easy to read views, dashboards and email alerts.
- Communications – Use Microsoft Outlook to enter and track project related activities including Tasks, Emails, Calendar Appointments, or user defined activity types. Route emails using the Intelligent Routing Engine to ensure Project and Contact communications are tracked and stored for as long as you need it.

Monitor all project activities with dashboard views.

Safety Management for Contractors

Safety compliance and activity management built to work the way you do

Compliance with regulations and safety on your projects requires more and more of your resources to manage. You can control your investment and your liability with safety management built for your industry. Manage all key safety processes including accidents, incidents, inspections, and OSHA reporting. Schedule, manage and track employee safety training.

Central safety management for full compliance

With all aspects of the safety process managed within one technology, organizations can track all key safety processes from initial training to inspections to claims to hazards and OSHA reporting. Built on a web platform, operating through Microsoft Outlook, Skyline Safety Series simplifies life for Compliance Managers with one central location to manage all safety related information and reporting.

Manage incidents with full compliance.

Skyline Construction Series Safety Management provides:

- Track Employee Training and Certifications – Manage all aspects of your employee's training, certification and human resources information. Workflows alert managers with renewal dates and reminders.
- Safety Programs – Automated questionnaire prompts managers to perform employee safety reviews and training consistently.
- Inspections – Use Inspection templates to copy existing Inspection Items for field review and entry. Corrective Actions are generated automatically as Inspection Items are tagged as non-compliant.
- Incidents – Track and manage key information from initial incident entry to notification to follow up and reporting. Corrective Actions are generated automatically as Incidents are opened.

*Monitor employee training
in one central location.*

*Track claims from filing
through settlement.*
